# A Solid Phase Method for Gamma-Hydroxybutyrate (GHB) In Blood, Urine, Vitreous, or Tissue Without Conversion to Gamma-Butrylactone (GBL)

### **UCT Part Numbers**

ZSGHB020

Clean Screen® GHB 200 mg, 10 mL SBSTFA-1-1 Selectra-Sil BSTFA with 1% TMCS 1g vial

GHB working standard; 200 μg/mL in H<sub>2</sub>O; prepared from Cerilliant stock 1 mg/mL.

GHB –D<sub>6</sub> working internal standard; 100 μg/mL; use as supplied Cerilliant stock (0.1 mg/mL).

Working Standard	Whole Blood	Concentration
10 μL	200 μL	10 μg/mL
25 μL	200 μL	25 μg/mL
50 μL	200 μL	50 μg/mL
100 μL	200 μL	100 μg/mL

## **Sample Pretreatment:**

• Make calibration standards and Pipette 200  $\mu L$  of sample into appropriately labeled 1.5 mL plastic centrifuge tubes

Note: Samples include urine, vitreous humor or homogenized tissue (1:4)

- Add 25 μL of internal standard.
- Add 1 mL of acetone; Vortex 15 seconds.
- Centrifuge; Transfer acetone layer to culture tubes.
- Evaporate extracts @ 70°C w/nitrogen.
- Reconstitute the dried extracts with 200 μL of 100 mM Phosphate Buffer (pH 6.0); Vortex 15 seconds.

#### **SPE Procedure:**

#### 1. Condition Clean Screen® GHB Extraction Column:

- a) 1 x 3 mL of CH₃OH
- b) 1 x 3 mL of D.I. H<sub>2</sub>O
- c) 1 x 1 mL of 100 mM Phosphate Buffer (pH 6.0)

Note: Aspirate at 3 inches of Hg or less to prevent sorbent drying.

#### 2. Apply Sample

- a) Add sample with Eppendorf pipette.
- b) Aspirate at ~1 inch Hg.

#### 3. Elute GHB

- a) Place clean test tubes into vacuum manifold.
- b) Add 1 mL of CH₃OH/NH₄OH (99:1) to original sample test tube; Vortex.
- c) Decant onto column and collect extract.
- d) Aspirate ~1 inch Hg.

#### 4. Concentrate

- a) Remove test tube from Vacuum Manifold.
- b) Evaporate to dryness at 70 °C using a steam of nitrogen or air.

#### 5. Derivatize

- a) Add 100  $\mu$ L of ethyl acetate and 100  $\mu$ L of BSTFA with 1% TCMS. Mix/Vortex.
- b) Heat at 70 °C for 30 minutes.

#### 6. Quantitate

a) Inject 1 to 2 µL onto gas chromatograph.

# **Quantitation Ion:**

Compound	Primary Ion	Secondary	Tertiary	Cerilliant #
GHB-D <sub>6</sub> -di-TMS	239	240	241	G-006
GHB-di-TMS	233	234	235	G-001

**Quality Control NOTE:** Quality control samples were prepared using drug free blood and 1 mg/mL in house stock standard prepared using GHB stock from Sigma (#H-3635). A negative, low and high QC sample was prepared and stored frozen in 0.5-mL aliquots until use.
